

PBX-Intercom/Paging Integration Solution

Adaptable and Affordable

Intercom/Paging systems can be seen everywhere – whether it is business facilities requiring entrance access control or larger public locations requiring overhead broadcasting or emergency notifications – the system is massively needed by various business scenarios and industries, including education, healthcare, hospitality, transportation-related infrastructure, etc. Yet a stand-alone intercom/paging solution often burdens SMEs with limited budget and fail to delight customers because of incremental interoperability issues and inefficient operations.

How Yeastar-Hikvision Integration

Solution Helps?

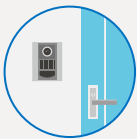

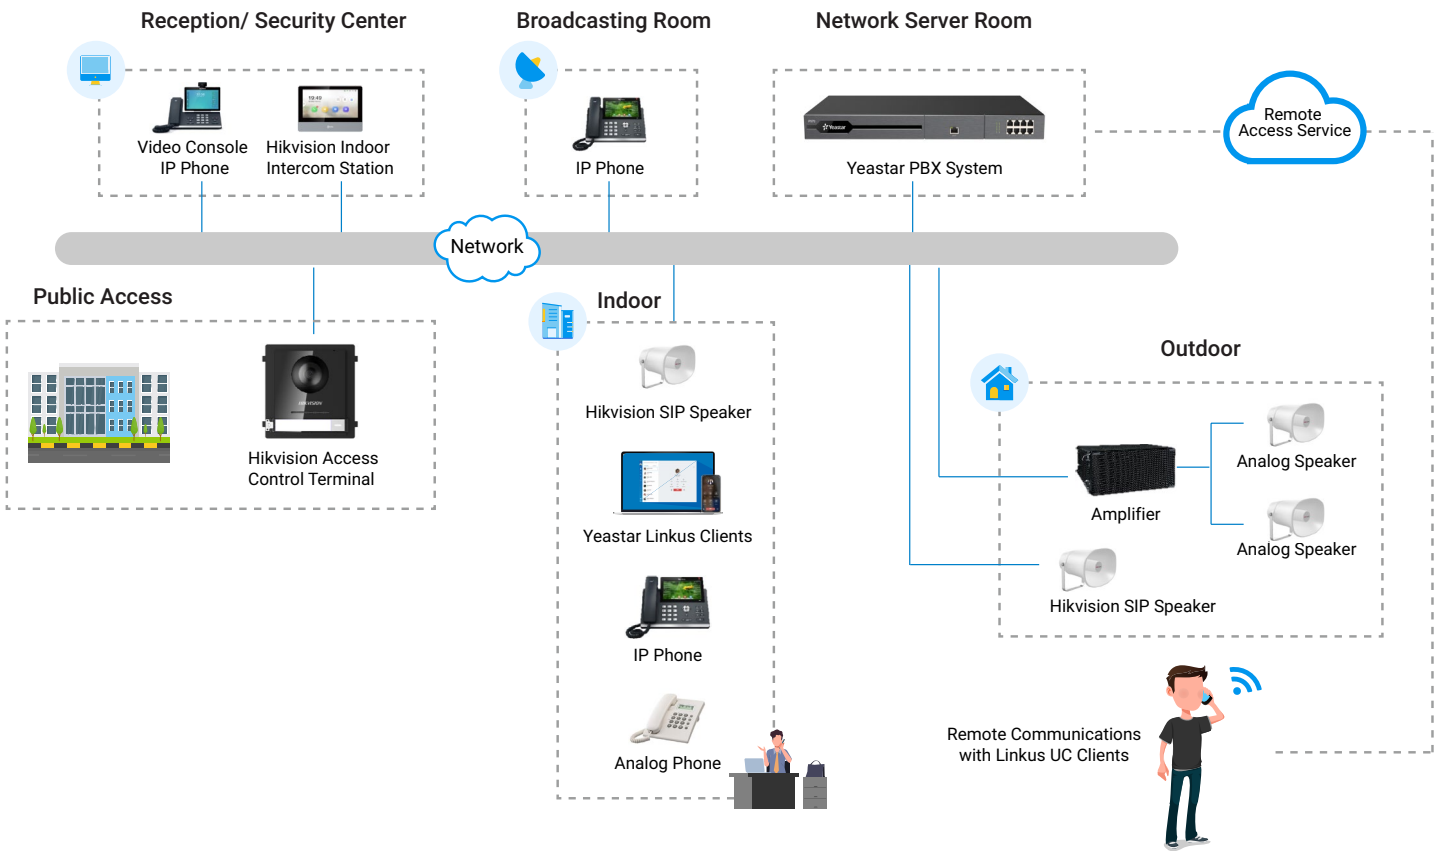

Beyond just a standard phone system, Yeastar PBX brings the robust built-in paging/intercom functionality together with the high-quality Hikvision door phones and SIP speakers to constitute better intercom or public address solutions for customers at a right price.

Featuring excellent interoperability and all-inclusive features, the solution makes Hikvision endpoint a regular PBX extension and allows users to quickly intercom, make zone paging, and even control door access to the premises – from anywhere without requiring any separate intercom/paging server. Ideal for cutting business outlay while achieving the true efficiency with anywhere-anytime remote communications and control.

Solution Benefits at a Glance

- Seamless IP-based Intercom Integration
- Flexible public access control through different terminals
- Eliminate expensive separate paging/intercom systems
- Facility-wide announcements and agile emergency management
- Built-in advanced scheduled paging/intercom functionality
- Excellent interoperability between Yeastar PBX and Hikvision SIP endpoints to ensure best customer experience: visual intercom, remote access control, ring simultaneously, etc.
- Advanced UC & C experience with Yeastar PBX support: multi-client apps, integrated video conferencing, presence, instant messaging, file sharing, etc.
- Minimized configuration and quick deployment

The topology below demonstrates how Yeostar-Hikvision Integrations bring a better and easier intercom, zone paging, and public access control solution.

Easy Public Access Control for Business

- Answer and open the door from any Yeostar PBX extension anywhere – in the office or on the road
- See who is at front door and converse easily via video IP Phone or via Yeastar Linkus Web Client
- Screen visitors at entrances, car parks & security barriers
- Auto-forward door phone calls to your mobile number or Linkus Mobile Client when not answered.
- Easy integration with Hikvision Indoor/Outdoor Intercom and SIP devices alike

Built-in Overhead or Zone Broadcasting

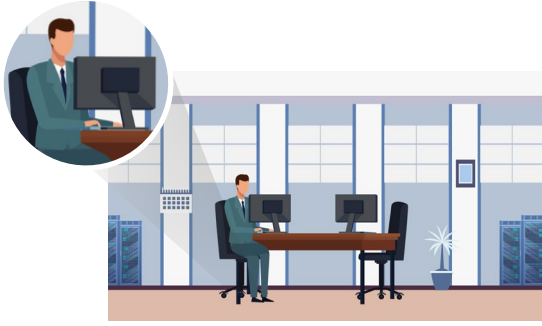

- PBX built-in paging system. Eliminate expensive separate paging server.
- Robust permission control to limit who can broadcast pages and who can only receive them.
- Easy broadcasting from the devices you like (IP phone or Mobile/PC with Linkus UC Clients).
- Advanced scheduled paging for efficient routine notifications.
- Efficient zone announcements and emergency alert with Hikvision SIP Speaker.

Business Unified Communications

- Yeastar Linkus UC Clients for a consistent in-office communications experience anywhere anytime
- Drag-and-drop operator panel for more efficient call handling
- Integrated video conferencing, in-meeting screen sharing and team chat
- PBX-native Contacts management that syncs across devices and facilitates speed dial
- Hassle-free remote working in minutes contributed by Yeastar Remote Access Service
- Rich robust call center features, Microsoft Teams integration, CRM integrations, and more.

Customer Use Cases

Office Building

Enhance communications and collaboration from the device you like, with all-inclusive phone system features, video conferencing, instant messaging, file sharing and more.

Unattended Parking Lot or Door Gate

Whenever your unattended parking lots or door gates have issues, your security guard/employee can talk instantly with visitors and provide help in no time – from the central office or even anywhere with Linkus UC Clients. The seamless conjunction between the outdoor intercom and the central PBX makes things easy.

Airport

Easy facility-wide ad-hoc/scheduled broadcasting, anywhere-anytime staff connectivity with Linkus UC Clients, and seamless inter-office communications with custom dialing plan, auto call-dispatching, recording, etc.

School

Reduce overhead with PBX built-in paging feature for routine class rings, ad-hoc broadcasting, and ensure a securer environment with mass emergency alerts.

Hospital

Seamlessly integrate office phone, paging, and security system into a unified one that features easier zone announcement, more efficient doctor-patients communications, and instant connection between the administrative and security personnel.

For 15 years, Yeastar has served more than 200,000 customers in over 100 countries with reliable, robust and flexible PBX systems & UC solutions that connect workforce and clients more efficiently. 100%-channel focused, Yeastar is dedicated to helping partners - and resellers like you - to accelerate business in the fast-moving and profitable VoIP market.
